## VMGSim™ Advanced Process Simulation

Simulation Software with the largest pure component database commercially available. Over 5,000 pure components. Molecule builder enables graphical construction of complex molecules and automatically estimates physical properties and group contributions. Write custom reactor kinetics without programming knowledge. Create custom unit operations embedded in your process model using the embedded Excel™ operation. Embed HTRI Xchanger Suite™ exchangers in the process model. Completely Interactive, Bidirectional simulation environment. **For more information visit our website at [www.virtualmaterials.com](http://www.virtualmaterials.com)**

Reader Service Number # 151

## Chemical Engineering Modeling Tool

COMSOL, Inc.'s FEMLAB puts you on the front line! FEMLAB Chemical Engineering comprises a powerful, unique environment for modeling momentum, heat and mass transport coupled to chemical reactions. Now you can model fluid flow, gas flow and incompressible turbulent flow using a single tool. FEMLAB's key features include: simultaneous solving of an arbitrary number of coupled nonlinear

PDEs and state-of-the-art solvers for linear and nonlinear stationary and time-dependent problems in 1D, 2D, and 3D. **[www.comsol.com](http://www.comsol.com)**

Reader Service Number # 152

## Piping Design Software

Chemstations has released CC-SAFETY NET for piping networks and safety relief systems, including two phase venting. These systems can be studied in a steady state or dynamic

mode. The calculations use the core components of the CHEMCAD simulator: a full physical property database and set of thermodynamic options for calculating phase equilibrium; this sets CC-SAFETY NET apart and gives users distinct, bottom-line advantages.
