# 86,604 data points and counting,

Accuracy. In chemical engineering it's not only important, it's essential. The DIPPR 801 database sets a new standard for accuracy with complete, evaluated, cost-efficient data. Data so accurate it can help you avoid setbacks and reduce over-design costs.

Containing 1,793 components that have been rigorously evaluated, DIPPR 801 provides the thermophysical property data you need. You get 33 fixed-value and 15 temperature-dependent properties for each evaluated component. That's 86,604 data points.

And the list of components that have been evaluated keeps on growing, making DIPPR 801 the best choice for meeting your on-going data needs. Developed by committed industrial sponsors of AIChE's DIPPR technology alliance, DIPPR 801 is the only source of physical property data available with the powerful, user-friendly DIADEM interface.

**For more information on DIPPR 801 visit:**  
<http://dippr.byu.edu> or email [salesdippr@byu.edu](mailto:salesdippr@byu.edu).

# Intelligen Suite

The Market-Leading Engineering Suite for Modeling, Evaluation, Scheduling, and Debottlenecking of Single & Multi-Product Facilities

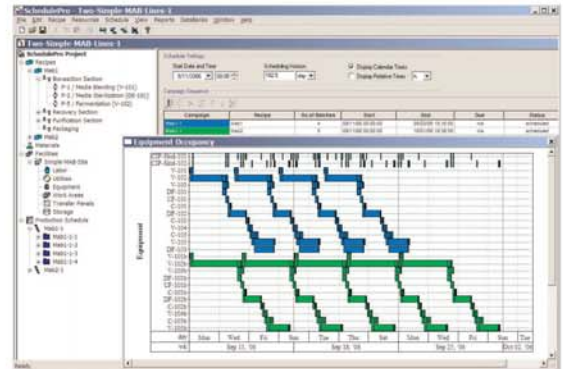

## SuperPro

Use SuperPro Designer to model, evaluate, and debottleneck batch and continuous processes

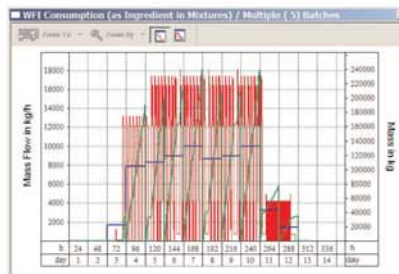

## SchedulePro

Switch to SchedulePro to schedule, model, and debottleneck multi-product facilities

Tracking of equipment occupancy in multi-product facilities

Tracking demand for resources (e.g., labor, materials, utilities, etc.)

Inventory tracking for raw materials, intermediates, products, and wastes

**SuperPro Designer** is a comprehensive process simulator that facilitates modeling, cost analysis, debottlenecking, cycle time reduction, and environmental impact assessment of biochemical, specialty chemical, pharmaceutical (bulk & fine), food, consumer product, mineral processing, water purification, wastewater treatment, and related processes. Its development was initiated at the Massachusetts Institute of Technology (MIT). SuperPro is already in use at more than 400 companies and 500 universities around the world (including 18 of the top 20 pharmaceutical companies and 9 of the top 10 biopharmaceutical companies).

**SchedulePro** is a versatile finite capacity scheduling tool that generates feasible production schedules for multi-product facilities that do not violate constraints related to the limited availability of facilities, equipment, resources and work areas. It can be used in conjunction with SuperPro (by importing its recipes) or independently (by creating recipes directly in SchedulePro). Any industry that manufactures multiple products by sharing production lines and resources can benefit from the use of SchedulePro. Engineering companies use it as a modeling tool to size utilities for batch plants, identify equipment requirements, reduce cycle times, and debottleneck facilities.
