GREETINGS!

Thanks for volunteering for our Student Outreach activities. I am sure you will find it as fun and rewarding as the students and teachers do. We have tried to make this as easy as possible. You should find everything you need to present to any classroom. Younger students need to be engaged and hands-on. Presentations might be appropriate for high school students. Make sure you thoroughly discuss your plans with the teacher (see preparation guide). We have a number of projects/presentation all layed out for you, as well as a whole set of other projects we have taken from the literature that you might want to explore.

Reference information and a listing of available resources are included in the kit. Handouts “What Do Chemical Engineers Do?”, “Amazing Achievements of Chemical Engineers” are included.

Please let us know how this kit can be improved, and by all means let us know if you have stuff to add to it. And PLEASE return a feedback form (handwritten is fine) after every presentation. It is important we learn from each others’ experiences and keep track of what we have accomplished.

From the Chicago Section Executive Committee and all the members of the Student Outreach Committee, thanks again for your interest and your help. Enjoy.

Annette Johnston,
Student Outreach Chair
